ScanSoft Files Patent Infringement and Trade Secret Misappropriation Lawsuit Against Voice Signal

Patent Covers Voice Dialing for Mobile Devices

PEABODY, Mass. and CANNES, France, February 23, 2004 - ScanSoft, Inc. (SSFT), the leading supplier of speech and imaging solutions, today announced that it has filed a patent infringement and trade secret misappropriation lawsuit against Voice Signal Technologies, Inc. in the United States District Court for the Commonwealth of Massachusetts.

In its complaint, ScanSoft states that Voice Signal Technologies, Inc. infringes a patent that covers voice-activated dialing for mobile telephones and has misappropriated ScanSoft confidential information and trade secrets in the field of speech recognition related technologies. In the patent infringement claim, ScanSoft seeks monetary damages for past infringement and injunctive relief to prevent Voice Signal from continuing to use U.S. Patent No. 6,501,966 "Speech Recognition System for Electronic Switches in a Wireline Communications Network."

In the trade secret misappropriation claim, ScanSoft states that Voice Signal has misappropriated and uses ScanSoft confidential information and trade secrets in the field of speech recognition and related technologies, which ScanSoft acquired when it purchased certain assets from Lernout and Hauspie in 2001. This trade secret information includes speech and natural language information and technologies that provide ScanSoft with competitive advantages in the market for embedded speech products.

"ScanSoft has invested heavily in developing technologies and acquiring intellectual property that are critical to the success of our business," said Jo-Anne Sinclair, vice president of general counsel, ScanSoft. "These specific patents and trade secrets are proprietary to ScanSoft and provide distinct applications for mobile devices that differentiate our solutions from competing offerings. ScanSoft values its intellectual property and intends to assert its patent and trademark rights to protect its technology and prevent infringing use by others."

ScanSoft, Inc. holds more than 425 patents in the fields of speech and imaging, and has made significant investments in research, development and the acquisition of intellectual property to provide its customers with unique, best-of-breed solutions. The company will continue to drive innovation through the patenting of proprietary technologies.

About ScanSoft, Inc.
